

**REMARKS**

The Amendment addresses the section 112 problem.

A terminal disclaimer is enclosed to overcome the double patenting rejection.

The amendment above adds elements and limitations to the claims not found in the cited art. In particular, the angular limitation of light departing from the device establishes nonobviousness of the claims. This limitation has already been found to be patentable in U.S. Patent No. 6,783,362 also filed by Applicant and which has the same priority claim as the instant application. Therefore the Office should permit the claims having that limitation to be patented in this patent application as well.

Reconsideration is requested. Applicant believes the case is now in condition for allowance. If any additional fees are due those fees should be charged to deposit account no. 50-0581.

Respectfully submitted this 8th day of December, 2004.
